## Re: Data Analyst Opportunities

Dear Hiring Manager,

I am writing to express my interest in Data Analyst opportunities within your organization. I bring hands-on training in Python, SQL, Excel, Power BI, Tableau and exploratory data analysis, supported by a portfolio of five projects that demonstrate how I convert raw data into clear, decision-ready insights.

In my Amazon Prime exploratory analysis, I cleaned, merged and analyzed 124,235 credit records and 9,871 title records, documenting more than 16 insights across ratings, genres, runtime and release trends. I also developed a 23-visual Power BI dashboard using DAX and data modeling to communicate key performance indicators and content patterns. These projects strengthened my ability to validate data, investigate business questions and present findings in an accessible way.

My broader portfolio includes a relational database design for a food-delivery product and a local-first Python automation system that prepared 422 unique videos, detected 10 duplicates and managed scheduled uploads through a durable SQLite queue. Together, this work reflects practical problem solving, attention to data quality and the discipline to build reliable, documented solutions.

Before transitioning into analytics, I worked as a Sales Manager at Star Health Insurance. That experience developed my customer communication, follow-up, prioritization and stakeholder-management skills. I can therefore combine technical analysis with the ability to understand requirements and explain results clearly to both technical and non-technical audiences.

I would welcome the opportunity to contribute my analytical mindset, learning agility and ownership to your team. My project evidence is available through the portfolio website and GitHub links above. Thank you for your time and consideration; I look forward to the possibility of discussing how I can support your data and reporting objectives.

Sincerely,

**Amit Karmakar**
